THE SUSTAINABLE
ALTERNATIVE -

Our viscose shortcut fibers

New in the product portfolio of Barnet Europe are viscose fibers which we offer in 0.9 and 1.7 dtex. Other titers are possible on request.

The cutlength is optional from 3 mm upwards according to customer requirements. Our viscose fibers are FSC® certified and food approved.

Viscose is a regenerated fiber made of cellulose, a naturally occurring, renewable resource.

It is suitable for wetlaid- and paper-process.

The nonwovens are used as a filtration-media.

Standards fulfilled!

CERTIFIED COMPANY,
CERTIFIED PRODUCT

Due to the increased demand, we have decided to have our viscose short cut fibers officially certified by the FSC to meet the needs of many customers for sustainable raw materials.

The basic requirement for obtaining an FSC certificate is to establish a monitoring system that specifies how material flows and FSC statements can be monitored and disruptions ruled out. Our company has implemented all requirements, established necessary structures and subsequently received the FSC certificate. Thus, our company complies with the FSC certification to all required standards with regard to a fully traceable supply chain, the so-called chain of custody [COC]. This ensures that all raw materials come from companies that are also certified and whose raw materials come from sustainable forestry. In FSC-certified forests, wood is produced according to high ecological and social standards.
