

We produce expanded metal and filters for different areas. In Sifim we combine the words development with the concept of teamwork. We were born in 1995 and our intense work has allowed us to operate at an international level and to collaborate with the major European brands of household appliances

quality

We have adopted an industrial process that monitors the various processes with meticulous and accurate checks and inspections, also making use of sample inspections in each production phase. Since 2001 we have been certified according to the ISO 9001 – VISION 2000 standards to give the best guarantee on each outgoing product.

attention to the environment

We strongly believe in the circular economy and that is why all waste materials are recovered and recycled in a sustainable way, to guarantee the safeguarding of the community in which we all live, while providing new materials for other industries. At the same time, we are aware that it is very important to minimize our carbon footprint. This is why our production plant, covering over 5,500 m², is equipped with the most advanced green technologies, including geothermal heating and photovoltaic panels for the efficient production of clean energy.

the relationship with suppliers

We consider our qualified suppliers of goods, services and processes as fundamental partners. For this we request a series of information on the organization of suppliers and compliance with applicable regulations on the subject of the environment, safety and ethics.

automation

Several robotic units have recently been created, including a preparation line for the filter panels and lines for the production of new concept filters, without profiles, in which the external perforated containment grid, suitably shaped, also performs the function of frame/surround.

attention to the customer

Our efficient teamwork accompanies customers with speed, accuracy, clarity and transparency from the first contact and throughout the design process. Right from the product design phase, we pay particular attention to collaboration with customers.
