

1" PISTON VALVE AND TEC

LAST ADDITION TO TRIMEC RANGE

One of the recent additions to our product range is the expansion of the piston valve series. After conducting extensive and meticulous tests, we now offer a valid alternative to tanks with 6/8/10-inch diaphragm valves, delivering high performance even on 1", 1-1/2" , and 2" sizes. It's a perfect combination when paired with the TEC and the tank.

TEC (Trimec Easy Connection) is a new electric system for pulse jet valves. TEC is simple, smart, and cheap, eliminating the need for complex electrical wirings. It comes with a multi-cable already wired to the pilot group, with a terminal cable of up to 8 meters in length for connection to the control unit. TEC can be supplied with a quick-fit connector or free cables for easy pairing with any kind of controller or PLC.
